

### **Eyeliner Pre-Care**

- Avoid lash tinting, perming, curling 2 weeks before appointment. It can be done in 2 week after.
- Please don't wear any makeup around your eyes (mascara, eye shadow, concealer) for the appointment. Ensure your eyes are clean.
- Refrain from wearing lash strips 24 hours before your appointment as glue residues will make your eyes sensitive.
- Avoid alcohol for 24hrs before your appointment. Alcohol can thin the blood, which can cause the skin to be hypersensitive, and bleed / bruise easily.
- Avoid blood thinning medications for 48 hours before your appointment. This includes ibuprofen, aspirin and fish oil tablets. Please consult your doctor if this is an issue.
- Eyelash extensions have to be removed at least 3 days before the procedure.
- Stop using lash serums, especially Latisse, 4 weeks prior to your procedure. The reason is that those types of serums are stimulants. They will make your eyelids too fragile and vascular for cosmetic tattooing.
- Contact lenses need to be removed for this procedure and should not be replaced for a minimum of two hours after. It is advised to bring a pair of glasses for the drive home.

**\*\*\*Failure to follow these instructions can lead to bleeding during the procedure, severe inflammation of the treated area, low pigment retention and poor healed results.**
