

Powderbrows Aftercare Instructions

It is essential that you follow these instructions after your Powderbrows session, **70% of your healed results depend on how you took care of your brows during the healing process!**

- **Day 1:** Apply a small amount of a mild soap to the palm of your hand (freshly washed hands) and mix it with water. Gently cleanse the treated area. RINSE THOROUGHLY with water and pat completely dry with a soft tissue. DO NOT scrub aggressively. Repeat this procedure 3 times during the day on day 1. Apply a rice grain amount of the post care ointment once before going to sleep.
- **Day 2-7:** Maintain facial hygiene avoiding the eyebrow area, and apply a very thin layer of the post-care ointment with a Q-tip once or twice a day until day 7.

The following **MUST** be avoided during 7 days after the procedure, or until the peeling is over:

- Increased sweating
- Practicing sports
- Swimming
- Hot sauna, steam rooms, hot baths, or Jacuzzis
- Sunbathing and tanning beds
- Eyebrow makeup
- Sleeping on your face
- Any laser or chemical treatments and/or peelings
- Using creams containing Retinol, Retin-A, Glycolic Acid, or Renova on the face
- Picking, peeling and scratching of the treated areas in order to avoid scarring of the area or removal of pigment
- Performing tasks related to heavy household cleaning
- During your shower, face away from the oncoming water
- Itching and flaking may occur during the healing. Only use a Qtip or a cotton disk with post-care cream to relieve the itch, ensuring they heal properly.

What to expect expect after treatment

It is normal to feel a sunburned sensation for a couple of days followed by dry, itchy, or tender skin. Your new eyebrows will go through several phases during the healing cycle and will appear darker and very sharp for a few days after the appointment. During healing, they will lighten 30-40% and shrink in size. As your skin naturally exfoliates and regenerates, you will notice color change, disappear and reappear as it settles. Flaking is expected, and eyebrows will appear softer and less visible but will slowly reappear over the next few weeks once the skin is fully regenerated.

*****MEDICAL ATTENTION: IN CASE OF ABNORMAL INFECTION (SEVERE REDNESS, HEAT AROUND THE AREA OF THE PROCEDURE, EXCESSIVE SWELLING, DISCHARGE THAT IS THICK), SWELLING OR PAIN, OR DEVELOPING A FEVER SHORTLY AFTER BEING TATTOOED, PLEASE SEEK MEDICAL HELP FROM YOUR DOCTOR. YOUR HEALTH AND WELL-BEING ARE OF UTMOST IMPORTANCE.*****
